

Identifying Causality in News Media

Muhammad Hammad Mazhar (16100032)

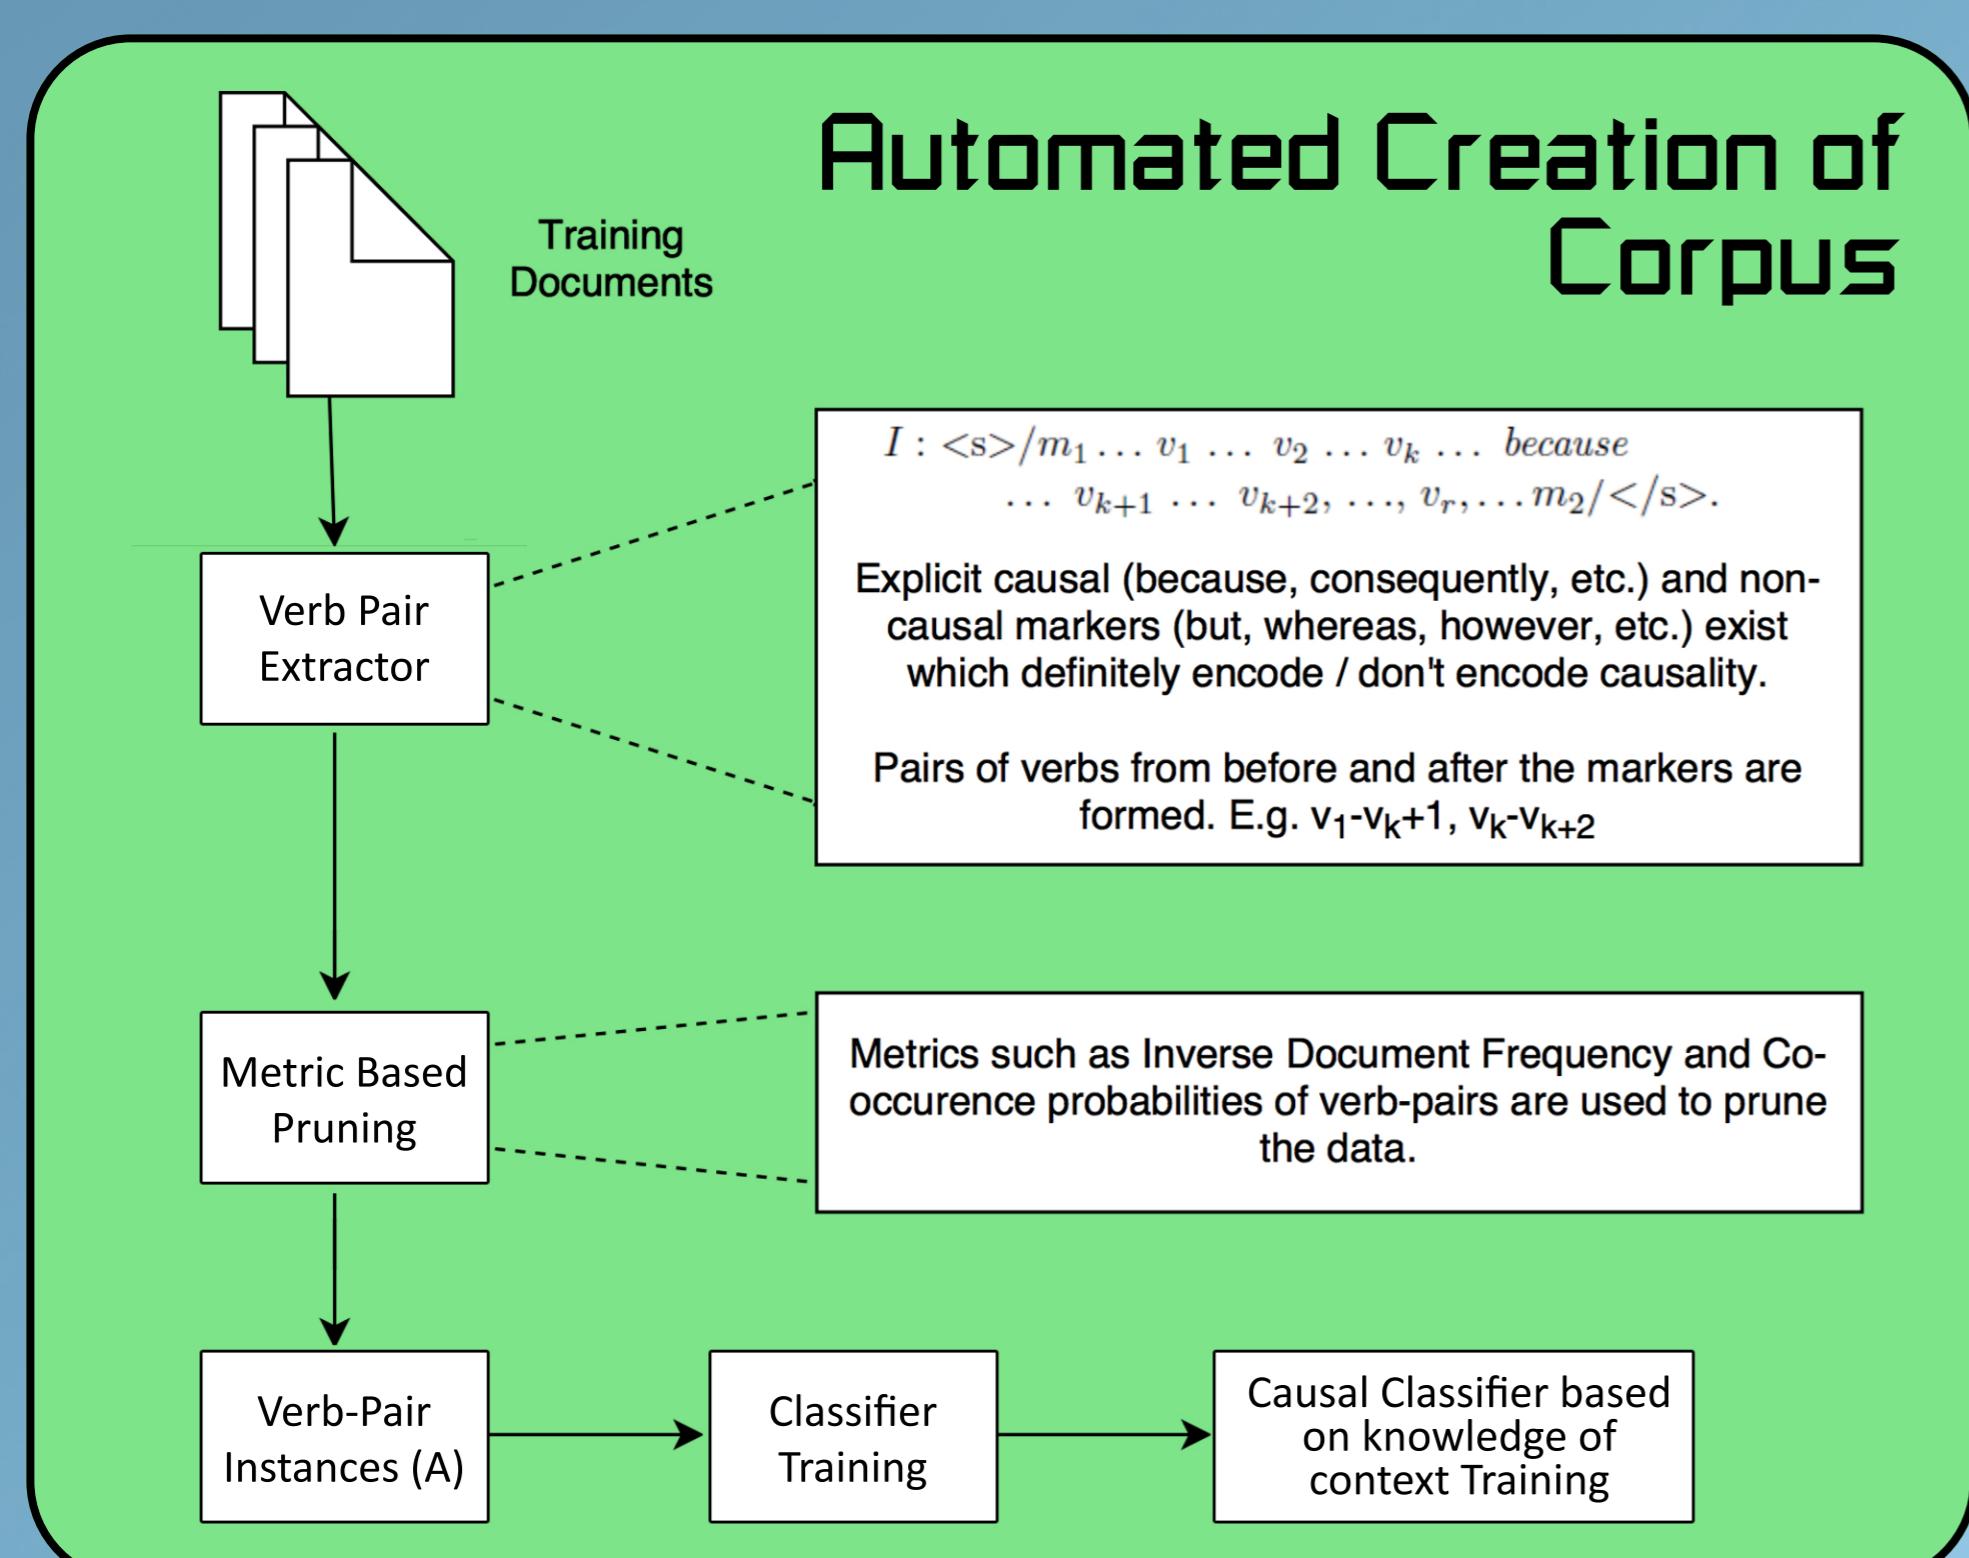

Muhammad Saad Hussain (16100089)

Problem

Extracting Events from News article texts and determining causal relations between them.

Proposed Solution

Create a system which automatically creates a training corpus, trains a classifier on this corpus, then uses the classifier, along with extracted background knowledge, to determine whether events in the given text are causal or non-causal.

Event Instance Extraction
